The great pyramid was built as a tomb for the Fourth Dynasty Egyptian pharaoh Khufu and estimated that it was built in the 26th century BC during a period of around 27 years.

Initially standing at 146.5 meters (481 feet), the Great Pyramid was the tallest man-made structure in the world for more than 3,800 years. Throughout history, the majority of the smooth white limestone casing was removed, which lowered the pyramid's height to the present 138.5 meters. What is seen today is the underlying core structure. The base was measured to be about 230.3 meters (755.6 ft) square, giving a volume of roughly 2.6 million cubic meters (92 million cubic feet), which includes an internal hillock
